F - 19 STEALTH FIGHTER, GETTING STARTED.

Required Equipment

Please note that this simulation requires a minimum of 512 K of RAM. A colour monitor or television is required for the ST version.

This simulation can be run entirely from the keyboard, with mouse and keyboard, or with joystick and keyboard. A joystick greatly improves the "feel" and realism, and is therefore strongly recommended.

Installation

The F-19 Stealth Fighter manual asks you to install the simulation onto back-up Floppy Disks. This is only necessary for IBM PC compatible versions. You do not need to install Atari ST or Commodore Amiga versions.

Your pilot records will be automatically saved to disk A, provided that it is write-enabled prior to loading.

Atari ST

Turn off your computer and remove all unnecessary peripherals. Insert Disk A into the internal drive and switch on the computer. The program will auto-load. Please follow any on-screen prompts. (If you have an additional external drive, disk B may be inserted into this drive, and will be automatically accessed by the computer when necessary).

Commodore Amiga

Turn off your computer and remove all unnecessary peripherals. Insert Disk A into the internal drive and switch on the computer. The program will auto-load. Please follow any on-screen prompts.

WHAT IF MY GAME FAILS TO LOAD?

In the vast majority of cases a loading problem is not because of faulty software, but either an incorrect loading proceedure or a hardware fault.

Please ensure that the loading instructions have been correctly executed. The commonest hardware failures are due to a misalignment of the heads in the disk drive. Such faults may be detected by loading the game on another computer. (Either use a friend's machine or ask the software store from which the game was purchased to test it).

Alternatively, a virus may have transferred into your hardware from another piece of software. Pirated copies of games are an incredibly common source of viruses. It always pays to own original software.

In the unlikely event of a software fault, please return the complete package, with receipt to the place of purchase. MicroProse regret that goods cannot be replaced unless bought from the company directly.

If you have any difficulty whilst loading F-19, or need help whilst running the simulation, MicroProse will be happy to help you on the Helpline. Please ring (0666) 504399.

FACT OR FICTION?: THE DEVELOPMENT OF "F-19 STEALTH FIGHTER"

NEWSFLASH

From the Department of Defense, Office of the Assistant Secretary (Public Affairs) November 10, 1988 (Washington D.C.): Today the U.S. Air Force announced the existence of an operational stealth fighter aircraft. This single seat, dual-engine jet was constructed by the Lockheed Corporation. built with bipartisan congressional support, it has been operational since 1983 with the 4450th Tactical Group, based on the Tonopah Airfield at Nellis Air Force Base, Nevada.

Technical specifications, possible missions, and operations have not been disclosed. However, design features and the use of A-7 trainers suggest that the plane is intended for clandestine reconnaissance, ground attack, and air-to-air ambushes. In short, the US Air Force's actual stealth fighter is amazingly similar to MicroProse's "F-19 Stealth Fighter" simulation, published for IBM PC compatible machines twelve months prior to the actual plane's disclosure. It is known that the Air Force uses the designation "F-117A" instead of "F-19".

Stealth Fig

1978: Lockheed receives the program "go ahead" from the U.S Department of Defense.

1981: Lockheed test-flies the new Stealth Fighter.

1983: The U.S. Air Force accepts delivery of the first fighters and the 4450th TG becomes an appropriate upit

operational unit.

1986: A fatal Stealth Fighter crash in Bakersfield, California is hushed up by the Air Force

before the news media discovers what

happened.

1987: MicroProse first publishes a Stealth Fighter

computer simulation for IBM PC compatible

machines.

1988: The U.S. Air Force admits that Stealth Fighters

4

have been operational for the last five years.

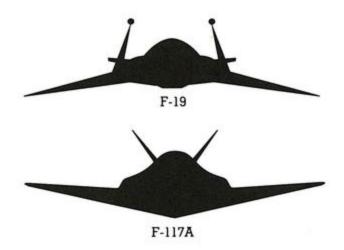

1989:

MicroProse begin work in the UK on "F-19 Stealth Fighter" for Atari ST and Commodore Amiga machines. The decision is taken to retain the original characteristics of MicroProse's "F19 Stealth Fighter", as a testament to the accuracy of MicroProse's research, and to enhance the simulation by including an option to see the actual F-117A plane in external 3-D views.

1990:

Atari ST and Commodore Amiga versions are released.

Diagrams of F-19 and F-117A

ADDITIONAL FEATURES for ATARI ST and COMMODORE AMIGA VERSIONS

Pre-Flight Options

Method of Control

Once the game has loaded, you will be asked to select your method of control, by pressing one of the numeric keys on the keyboard, as follows;

- 1. Mouse
- 2. Joystick
- 3. Keyboard

The Pilot Roster

The original pilot roster will be automatically updated after each mission, provided that you have write-enabled your disk A. You do not have to 'install'the simulation onto back-up Floppy Disks.

Intelligence Briefing

Move the Controller up and down the list of options to highlight one, and press the Selector to toggle that option on and off.

To receive specific data on an item displayed on the map, move the Controller over that item on the map.

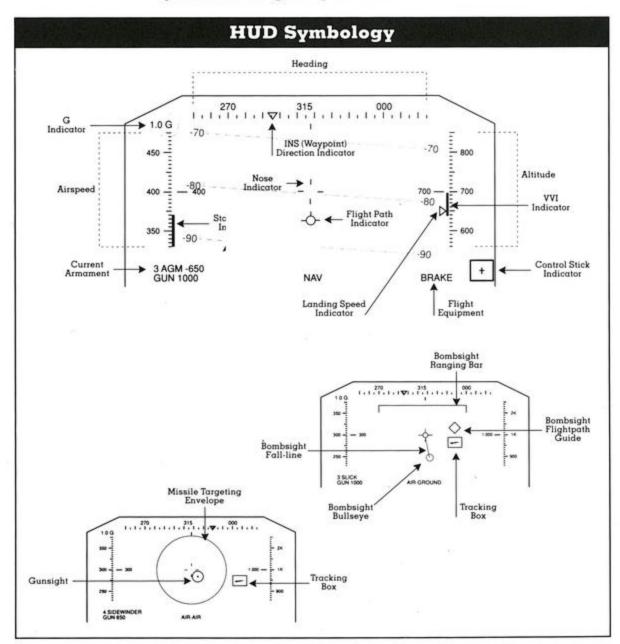

External Aircraft Views

As explained on the previous page, MicroProse's Software Engineers have added the option to view your plane in Slot View, Chase Plane, Side View, Tacti View or Inverse Tacti View, as either the F-19 or F-117A.

Your choice of plane is made immediately after the Mission Briefing, and before choosing the armaments for your mission.

In-Flight

The star system has been accurately mapped and is visible during night missions. It appears on screen as it would according to your actual position and heading. It is therefore possible to navigate by the stars!

Adjust stick sensitivity

'Ins' key

(tiny, small and medium stick movement)

Throttle

Max Pwr (maximum power)

Shift and '+=' key

Incr (increase throttle)

'=' key

Decr (decrease throttle)

'-' key

No Pwr (no power)

Shift and '-_' key

Other Flight Controls

Gear (landing gear toggle) '6' key (on main keyboard)

Flaps (extend/retract toggle) '9' key (on main keyboard)

Brakes (on/off toggle) '0' key (on main keyboard)

Autopilot (on/off toggle) '7' key (on main keyboard)

Accel (accelerated) time Shift and 'Z' key

Norm (normal) time Shift and 'X' key

Out-of-Plane Viewing

Slot View Shift and 'F1' key

Chase Plane Shift and 'F2' key

Side View Shift and 'F3' key

Missile View Shift and 'F4' key

Tacti view (you & enemy) Shift and 'F6' key

Invrs tacti (enemy & you) Shift and 'F7' key

Out-of-Cockpit Viewing

View ahead Shift and '?/' key

View rear Shift and '>.' key

View left Shift and '<,' key

View right Shift and 'M' key

Other View Keys

Zoom (view or map) 'z' key
Unzoom (view or map) 'x' key
View Angle (narrow or wide) 'c' key

Cockpit Controls

Cockpit View 'Fl' key **HUD Modes** 'F2' key CRT Maps (toggles left-side CRT) 'F3' key Data (on right-side CRT) 'F4' key Ordnance (on right-side CRT) 'F5' key System Damage (on right-side CRT) 'F6' key ILS (on/off the HUD) 'F9' kev Mission (on right-side CRT) 'F10' key Eject (bail out) Shift and 'F10' key

INS (Inertial Navigation System)

Select Waypoint (on right-side CRT) F7' key

Change Waypoint (on both CRTs) F8' key

Reset Waypoint (all) Shift and 'F8' key

Select/Change Previous Waypoint Minus (-) key on numeric keypad

Select/Change Next Waypoint Plus (+) key on numeric keypad

Move Waypoint Up (changing pt) Up-arrow (numeric keypad '8') key

Move Waypoint Down (changing pt) Down-arrow (numeric keypad '2') key

Move Waypoint Left (changing pt)

Left-arrow (numeric keypad '4') key

Move Waypoint Right (changing pt) Right-arrow (numeric keypad '6') key

Tracking Camera (appears on right-side cockpit CRT)

Cam Ahead '/' key

Cam Rear '.' key

Cam Left 'm' key

Cam Right , key

Select Target (in current view arc) b' key

Designate New Target (ahead only) 'n' key

Armaments

Ordnance (on right-side CRT) F5' key

Select Ordnance space bar

Bay Doors (toggles open/closed) '8' key (on main keyboard)

bay boots (toggles open) closed) o key (on main keyboard)

Fire Ordnance or return key, or right mouse button

Fire Cannon joystick button, or backspace key, or left mouse button

Defences

Flare (drop one cartridge) '1' key (on main keyboard)

Chaff (drop one cartridge) '2' key (on main keyboard)

IR Jammer (toggles on/off) '3' key (on main keyboard)

ECM (radar jammer on/off) 4' key (on main keyboard)

Decoy (drop one) '5' key (on main keyboard)

Simulation Controls

Pause (press any key to un-pause)

Alt and 'p' key

"Boss" (hides simulation) Alt and 'b' key

Quit Alt and 'q' key

Resupply (training only)

Alt and 'Y' key

Change missions to training Alt and T key

Keyboard Control Stick Adjust

'Ins' key

keybd sensitivity 3 = keypress causes large stick movement

keybd sensitivity 2 = keypress causes moderate stick movement (default)

keybd sensitivity 1 = keypress causes small stick movement

Volume Adjust (4 sound levels)

Alt and 'v' key

sound level 3 = all sounds

sound level 2 = all sounds except engine background noise (default)

sound level 1 = firing and explosions only (no warning sounds)

sound level 0 = no sound

Detail Adjust (2 levels)

Alt and 'd' key

detail level 1 = maximum detail on Tactical and Track Cam displays

detail level 0 = normal detail on Tactical and Track Cam displays

Slew Controls (4 directions)

slew north (training only)

Alt and 'i' key

slew west (training only)

Alt and 'i' key

slew south (training only)

Alt and 'k' key

slew east (training only)

Alt and 'l' key

Notes on Simulation Controls

Change Mission to Training (Alt and 't' key) Tapping this key converts your current mission into a training mission. This means that henceforth enemy weapons do no damage. Tapping Alt 't' again exits training.

Once a mission is converted to training you cannot score any points for it, even if you toggle training off again. However, the slew controls and resupply key only function when training is active.

Keyboard Control Stick Adjust ('Ins' key) This regulates the amount of control stick movement a keypress causes. We recommend you use this key frequently when flying, and always set the sensitivity to "1" on your final approach to landing.

Detail Adjust (Alt and 'd' key) The detail displayed on the Tactical and Track Cam displays may be altered from normal (detail level = 0) to maximum (detail level = 1). The tactical display shows all the 16 km grid lines at maximum detail, and the Track Cam update will appear to be smoother.

Slew (Alt and 'i','j','k','l' keys) These keys function only in training. Tapping the key "teleports" your aircraft in that direction. The distance you're "teleported" varies with the current Zoom/Unzoom scale of the satellite/radar map. Slew is an excellent way to check out the region whilst training.

Display Colours

HUD Targeting Colours

Black Rectangle Ineffective Weapon (day)

Brown Rectangle Ineffective Weapon (night)

White Rectangle Effective Weapon

White hexagon Effective Weapon, locked on target

Red hexagon Highly effective weapon, locked on target

Colour-boxed object Source of enemy radar signal

INS Waypoints Fuel Bar

Black region Fuel consumed

White Region Fuel for flight to current waypoint

Blue Regions Fuel for flight to other waypoints

Yellow Region Reserve Fuel

Tips to Pilots

When flying a mission don't expect the enemy to act randomly or stupidly. They have a surprising amount of intelligence. Fighters and AWACS planes patrol to cover radar weak spots, or protect especially important areas.

If you're spotted, interceptors are scrambled and vectored to your last known location. If they lose sight of your F-19, they investigate your last known position, but will eventually give up and go home. In addition, enemy aircraft and radar operators become more aggressive, sometimes even frantic, after they have repeated sightings, or have suffered a few losses.

The best way to get all the trouble you can handle is to engage "regular" or better enemies, and to loiter about the scene of a battle. Conversely, the best way to avoid trouble is to disappear from sight as quickly as possible. In general, trying to take on the entire enemy defence system with one F-19 is very unwise!

CREDITS

F-19 Stealth Fighter is brought to the Atari ST and Commodore Amiga thanks to:

Paul Hibbard - Publisher

Peter Moreland - Development Manager

The MicroProse UK Software Engineers

Adrian Scotney

"Tim"

Malcolm Hellon

and

Mark Scott - Graphic Artist

James Hawkins - 3-D Editing

Martin Moth - 3-D Editing

Many thanks to our colleagues in MicroProse USA for producing the brilliant original. Full credits for their work can be found in the manual.
